selectable marker gene linked to a vector backbone DNA. Also disclosed are a method for enhancing the selection of transgenic plants that do not contain vector backbone DNA, a method for reducing the copy number of a transgene in a plant cell, and a transgenic plant produced by the method. The DNA plasmid comprises the expression cassette comprising a promoter that functions in plant cells operably linked to a plant cell non-lethal negative selection marker gene. The promoter is a constitutive promoter. The promoter expresses the linked non-lethal negative selection marker gene product in tissue culture during plant regeneration. The plant cell non-lethal negative selectable marker gene comprises a plant hormone biosynthetic pathway gene, degradative gene, biosynthetic pathway gene or signalling gene, or metabolic interference biosynthetic pathway gene or signalling gene, or metabolic interference from antibiotic resistance and herbicide resistance. The transgene comprises a transgene of agronomic interest. The plant hormone comprises a transgene of agronomic interest. The plant hormone biosynthetic pathway genes, and abscisic acid pathway genes. The plasmid is useful for enes, cytokinin pathway genes, auxin pathway gene, ethylene pathway genes, and abscisic acid pathway genes. The plasmid is useful for enhancing the production of commercially viable transgenic plants. The present sequence representes bNA encoding Phaseolus coccineus gibberellin production of commercially viable transgenic gibberellin production of commercially by selected the production of commercially viable transgenic gibberellin production of commercially viable transgenic gibberellin production of commercially viable transgenic gibberellin production of commercially by an operative selected the production of commerc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence represents cDNA encoding a runner bean gibberellin (GA) 2-oxidase, PcGA2ox1. This enzyme is a GA 2-beta-hydroxylase that acts on C19-GAs and for which 2-beta-hydroxylation is its only activity. Hydroxylation at the 2-beta position of a GA results in a biologically inactive product, and is the most important route for GA metabolism in

tissues. The mucleic acids can be used to transform plants so that tissues. The mucleic acids can be used to transform plants so that cardiace the concentration of bioactive glas in the plants and the concentration of bioactive glas in the plants and therefore to inhibit plant growth. Growth inhibition is useful in many agricultural and horticultural applications such as enhancing lodging-cesistance and grain yield in cereals, improving seedling quality, reducing the growth of amenity grasses, reducing shoot growth in orchard and orneasing yields for the diversion of assimilates from vegetative to conditional processing by the growth of amenity grasses, reducing shoot growth in orchard and increasing yields (by the diversion of assimilates from vegetative to creproductive organs). The nucleic acids may also be used to induce male and increasing plants, inhibit creversibility in the development or germination of seeds and reduce shoot growth in commercial wood species. Antisense constructs of the nucleic growth in seedless grass, increase stem length and therefore and growth in seedless grass, increase stem length and therefore texture and fruit shape in apples, increase stem length and rhubarb, improve malting yields and quality in cereals (particularly barley), and increase growth in woody species.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     127

The specification
                  describes methods for the inhibition and control of gibberellic acid a chiefle. Gibberellic acid levels. Gibberellic acid levels may be inhibited or controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin blosynthetic pathway sequence, diverts substrate from the pathway, or degrades pathway substrates or products. The methods uses copalyl diphosphate synthase, 3beta-hydroxylase, oxidase, phytoene synthase, C20 oxidase, and a 2beta, 3beta-hydroxylase polynucleotides to achieve this. The method is used to control seed germination and seedling growth especially to regulate gene products of gibberellin biosynthetic pathway and restoration of normal seed germination, in transgenic plants. The plants produced are gibberellin deficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 ATGGTTGTTCTGTCTCAGCCAGCATTGAACCAGTTTTTCCTTCTGAAACCATTCAAGTCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to control of gibberellin (GA) levels in plants. The method involves producing transgenic plants having a phenotype of reduced send garmination and reduced early seedling growth, then restoring seed germination and early seedling growth by treating plants with an appropriate compound when conditions are favourable. The method is useful to control seed germination and/or early seedling growth in agricultural production so that unfavorable environmental conditions normally reducing agromomic output can be avoided and yields increased. Plants also demonstrate increased uniformity of germination, emergence and seedling vigor, so increasing yields at harvest. The method is especially useful in crop plants such as e.g. canola, soybean, cotton,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Control of gibberellin levels in plants useful to avoid unfavorable conditions in crops to increase yields, using transgenic plants having reduced seed germination and early seedling growth then treatment to

The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid representative of expressed polynucleotides in the plant cell with an array or probes representative of the plant cell genome; and (b) detecting a profile of expressed polynucleotides in the plant cell plantacteristic of a stress response. The method is useful in the production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that of an Arabidopsis thalians stress regulated gene (BMZ12196-ABZ17574) used in methods of the invention. Note: The sequence data for this patent is not represented in the printed specification but is based on sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           211 gagcaggaggcrafregcrfrcrgccrfcagrcrcrfaaaaaccgggcggrcca 270

involved in plant resistance or response to pathogenic infection. Micromprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an unlinfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (MI) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                  Identifying at least one gene involved in plant resistance or response pathogenic infection for conferring resistance or tolerance to a plant bacterial, fungal or viral infection by determining or detecting plant
                                                                                                                                                                                 present invention relates to a method (M1) for identifying genes

cornulate in plant tissues. The nucleic acids can be used to transform plants so that gibberellin 2-oxidase can be constitutively over-expressed cor otherwise enhanced to reduce the concentration of bloactive GAs in the plants and therefore to inhibit plant growth. Growth inhibition is useful in many agricultural and horticultural applications such as enhancing coloding-resistence and grain yield in cereals, improving seedling capality, reducing the growth of amenity grasses, reducing shoot growth in orchard and ornamental trees, improving tolerance to cold, drought and infection, and increasing yields (by the diversion of assimilates from vegetative to reproductive organs). The nucleic acids may also be used to induce male and/or female sterility (by expression in floral organs).

Contact prevent preverse sprouting, reduce shoot growth in hedging plants, inhibit reversibility in the development or germination of seeds and reduce shoot growth in commercial wood species. Antisense constructs of the nucleic acids can also be used to transform plants to reduce the expression of GA 2-oxidase (claimed) to promote plant growth, (e.g., to improve fruit set and growth in seedless grapes, citrus fruits and length and therefore yield in sugar cane, increase stem cleary and thubarb, improve malting yields and quality in cereals (particularly barley), and increase growth in woody species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GAIGGCACTIGGGITICAGICCCACCIGAICAGACTICCTITTICAICAAIGIIGGIGAC 738

This enzyme is a GA 2-beta-hydroxylase that acts on C19-GAs and for which 2-beta-hydroxylation is its only activity. Hydroxylation at the 2-beta position of a GA results in a biologically inactive product, and is the most important route for GA metabolism in plants, ensuring that the active hormones do not

CC TAIN, 4-dilipytoxyxy.2-butannon-4-phosphate synthase activity, appearing as croombinant DNA construct comprising the polynucleotide, a cell with the comprising the polynucleotide, a cell acqualatory sequence, transforming a cell with the polynucleotide, a cell comprising the recombinant DNA construct, producing a plant (comprising the recombinant DNA construct plant from the transformed plant cell), comprising transformed blant cell with the polynucleotide and regenerating a plant from the transformed plant cell), a plant comprising the recombinant DNA construct and a seed comprising the recombinant DNA construct and a seed comprising the recombinant DNA construct and as eed comprising consent from GTP cyclohydrolase II/3,4-dihydroxy-2-butannone-4-phosphate CC synthase, Dioxygenase, Riboflavin specific deaminase, Ethylene response consent from GTP cyclohydrolase II/3,4-dihydroxy-2-butannone-4-phosphate CC states, Acyl-CoA thioesterase II/3,4-dihydroxy-2-butannone-4-phosphate CC states, Acyl-CoA thioesterase II/3,4-dihydroxy-2-butannone-4-phosphate CC states, Acyl-CoA thioesterase II/3,4-dihydroxy-2-butannone-4-phosphate CC stansporter and MRPA ABC transporter. PMPNO ABC transporter and MRPA ABC transporter. PMPNO ABC transporter and MRPA ABC transporter. PMPNO ABC transporter and MRPA ABC transporter. CC stansporter and MRPA ABC transporter. PMPNO ABC transporter and MRPA ABC transporter. PMPNO ABC transporter and MRPA ABC Transporter. CC stound. The polypoptides can define to receit transporter and sequence for transporter. The nucleic acid fragment may be used to probe Southern blots containing restriction endonuclease-treated genomic DNA of a set of individuals representing parent and progeny of a d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          480

The invention relates to an isolated polymuclectide comprising a nuclectide sequence encoding a polypepide having GTP cyclohydrolase incledide sequence encoding a polypepide having GTP cyclohydrolase [1/34-dihydroxy-2-butanone-4-phosphate synthase activity, appearing as a culcectide sequence, a cecombinant DNA construct comprising the polymuclectide operably linked to at least one regulatory sequence, transforming a cell with the comprising transforming a plant cell with the polymuclectide, a cell comprising the recombinant DNA construct.

The polymuclectide and regenerating a plant from the transformed plant cell), producing a plant (comprising transforming a plant cell) with the polymuclectide and regenerating a plant from the transformed plant cell), the recombinant DNA construct and a seed comprising the recombinant DNA construct and a seed comprising the recombinant DNA construct and a seed comprising che recombinant DNA construct and seed comprising che recombinant DNA construct and seed comprising chesen from GTP cyclohydrolase [1/3,4-dihydroxy-2-butanone-4-pholism proteins chosen from GTP cyclohydrolase [1/3,4-dihydroxy-2-butanone-4-pholism protein chesen from GTP cyclohydrolase [1/3,4-dihydroxy-2-butanone-4-pholism protein chesen from GTP cyclohydrolase [1/3,4-dihydroxy-2-butanone-4-pholism protein chesen from GTP cyclohydrolase [1/3,4-dihydroxy-2-butanone-4-pholism comprise [1/3,4-dihydroxy-2-butanone-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ñ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               285

The present sequence encodes a gibberellic acid 2-oxidase 2 protein describes which is used in the method of the invention. The specification describes methods for the inhibition and control of gibberellic acid levels. Gibberellic acid levels achievels. Gibberellic acid levels may be inhibited or controlled by use of a chimeric expression construct expressing a RNA or protein which suppresses the gibberellin biosynthetic pathway sequence, diverts substrate from the pathway, or degrades pathway substrates or products. The methods uses copalyl diphosphate synthase, 3beta, 3beta-hydroxylase, 2-oxidase, phytone synthase, C-20 oxidase, and a 2beta, 3beta-hydroxylase polymucleotides to achieve this. The method is used to control seed germination and seedling growth especially to regulate gene products of germination, in transgenic plants produced are gibberellin deficient, and have shortened hypocotyl and/or epicotyl phenotypes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             'n,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               208
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             448
